$$\int_{0}^{1} \int \frac{1+x^{2}}{1+x^{2}} dx. \quad \text{write } x=\tan u. \qquad d(\tan u) = \sec^{2}u du.$$

$$\int_{0}^{1} \int \frac{1+\tan^{2}u}{1+\tan^{2}u} d(\tan u) = \int_{0}^{\frac{\pi}{4}} \int \sec^{2}u du. \quad \sec^{2}u du.$$

## Problem 2.6 from Spring 2020 Final: evaluate the integral

$$I = \int_{-\frac{1}{R}}^{\frac{3}{R}} \frac{x \sqrt{Rx+1} \, dx}{\sqrt{(Rx+1)^3}}.$$
3

$$I = \int_{-\frac{1}{R}}^{\frac{3}{R}} \frac{1}{R} \cdot Rx \int_{-\frac{1}{R}}^{\frac{3}{R}} \frac$$

$$=\frac{1}{k}\int_{-\frac{1}{k}}^{\frac{3}{k}} \sqrt{(knt)^3} dx - \frac{1}{k}\int_{-\frac{1}{k}}^{\frac{3}{k}} \sqrt{kxtt} dx$$

$$u = (kx+1)$$
, then  $-k \le x \le \frac{3}{R}$ .  
 $du = kdx$ . then  
 $dx = \frac{1}{R}du$   $0 \le kx+1 \le 4$ 

$$= \frac{1}{R} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R}$$

$$= \frac{1}{R^{2}} \int_{0}^{4} \int u^{3} \frac{du}{R} - \frac{1}{R^{2}} \int_{0}^{4} \int u \frac{du}{R} - \frac{1}{R^{2}}$$

$$= \frac{1}{R^{2}} \cdot \frac{2}{5} \cdot \sqrt{4^{5}} - \frac{1}{R^{2}} \cdot \frac{2}{3} \cdot \sqrt{4^{3}} = \frac{1}{R^{2}} \cdot \frac{2}{5} \cdot 2^{5} - \frac{1}{R^{2}} \cdot \frac{2}{3} \cdot 2^{3}.$$

$$= \frac{64}{5R^{2}} - \frac{16}{3R}.$$

$$= \frac{64 \times 3 - 16 \times 5}{15R^{2}}.$$
then  $0 \le k \le 2$ 

$$= \frac{(92 - 80)}{15R^{2}} = \frac{112}{15R^{2}}.$$

$$\int_{-\frac{1}{R}}^{2} x \sqrt{k \times 1} \, dx \qquad u = \frac{1}{15R^{2}}.$$

$$\int_{-\frac{1}{R}}^{2} x \sqrt{k \times 1} \, dx \qquad u = \frac{1}{15R^{2}}.$$

$$= \int_{0}^{2} \frac{u^{2} - 1}{R} \cdot u \cdot \frac{2u}{R} \, du = \frac{1}{15R^{2}}.$$

$$= \frac{1}{15R^{2}} \cdot \frac{1}{15R^$$
